Vaccines comprising the polypeptides are useful for the treatment and prevention of pneumococcal infections, particularly infections caused by Streptococcus, such as otitis media, nasopharyngeal, bronchial, lung or blood infections. The antigens are used as immunogenic agents to stimulate an immune response. The antisera and antibodies may also be used in diagnosing and treating pneumococcal infections. Recombinant polypeptides serve as a mechanism for tsimulating production of antibodies for use in passive immunotherapy, diagnostic reagents, and as reagents in other processes such as affinity chromatography. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 iragments) are useful as immunogens or antigens. Immunogenic or antigenic compositions comprising the proteins are useful as vaccines and also in diagnostic assays. The sequences are useful for the detection or also in diagnostic assays. The sequences are useful for the detection or diagnostic of S. pneumoniae infection, by contacting a sample to be tested with them. Agents capable of antagonising, inhibiting or interfering with the function or expression of the protein or polypeptide are useful in medical compositions in the treatment or prophylaxis of S. pneumoniae infection. As the sequences can be used to treat S. pneumoniae infection, they can be used to treat bacterial pneumonia, which has high rates in young children, the elderly, and in patients with predisposing conditions such as asplenia, heart, lung and kidney disease, diabetes, alcoholism, or with immunosuppressive disorders, especially AIDS. They can also be or with immunosuppressive disorders, especially AIDS. They can also be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein and a Streptococcus pneumoniae bacterium, where one or more genes encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2469 proteins expressed by the identified coding regions from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragmexpressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the

                                                                                                                                                                                                                                                                                                                                                                                                     are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-OCT-1997;

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frames) which are used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC (II), given in AA681454 to AA683120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used (I) and (II) can have antibacterial activity and therefore can be used (I) and (II) can have antibacterial activity and therefore can be used (I) vaccination. The nucleic acids (I) may be used to produce the CC containing them which are used to produce hosts cells which express the CC containing them which are used to produce hosts cells which express the CC used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their cativity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA CD polypucleotide sequences contained S. epidermidis genomic DNA CD polypucleotide sequences from the present invention. AAH55091 to CC AAH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. AAH55091 to CC AAH55098 represent invention specifically claims all the polypucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Also described are: (1) nucleotide sequences (1) vaccines against P. falciparum infection comprising (I) or (II).

(I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal P. falciparum infection. (I) and polyclonal antisera or of (I), are antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, useful in the detection of infection with P. falciparum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito

                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes 23 human molecules for disease detection CC and treatment (MDDT-1 to 23) (see ABP55392 to ABP55414). The human CC MDDT-1 to 23 proteins (I) are encoded by the sequences given in ABQ83859 to ABQ83881. (I) can have various activities depending on the cells and Ctissues in which they are expressed. These activities include: anti-HIV; CC antiallergic; antiinfertility; antianaemic; antiparkinsonian; nootropic; anticonvulsant; antiinfertility; antiarteriosclerotic; antiparksthmatic; CC immunosuppressive; antityproid; cytostatic; hepatotropic; dermatological; antidiabetic; nephrotropic; antiagrassitic; antiparkinic; antiparatic; costeopathic; antiarthricii; antiparasitic; neuroprotective; costeopathic; antiarthricii; antiparasitic; neuroprotective; costeopathic; ophthalmological; antitheumatic; haemostatic; antiparatic; curopathic; ophthalmological; antitheumatic; haemostatic; antibacterial; curopathic; ophthalmological; antitheumatic; haemostatic; antibacterial; curopathic; ophthalmological; antitheumatic; haemostatic; antibacterial; curopathic; ophthalmological; antitheumatic; haemostatic; antibacterial; curopathic; ophthalmological; antiparasitic, prolymuclectides conductive used for diagnosing, curopathic; ophthalmological; antiparative (e.g. cancer), developmental curopathic; particularly cell proliferative (e.g. cancer), developmental curopathic; particularly cell proliferative; e.g. cancer), developmental curoparatic, protozoal or helminthic infections. They are also useful in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of proteins associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ramkumar J, Swarren BA, Nguyen DB, Warren BA, Nguyen DB,

The present invention describes 23 human molecules for disease detection CC and treatment (MDDT-1 to 23) (see ABB55392 to ABB55414). The human CC MDDT-1 to 23 proteins (I) are encoded by the sequences given in ABQ83859 CC ABQ83881 (I) can have various activities depending on the cells and CC tissues in which they are expressed. These activities include: anti-HIV; CC antiallergic; antiinflammatory; antiarteriosclerotic; antiasthmatic; cc antidabetic; aphrotropic; antigout; thyromimetic; antiasthmatic; cc antidabetic; aphrotropic; antigout; thyromimetic; neuroprotective; cc osteopathic; antiarthritic; antiparasitic; hepatotropic; antipactail; cc virucide; protozoacide; and fungicide. (I) and the polynucleotides concoding them can be used in gene therapy. (I) polynucleotides, agonists ce and antagonists from the present invention can be used for diagnosing, treating or preventing disorders associated with aberrant expression of CC MDDT, particularly cell proliferative (e.g. cancer), developmental CC disorders, neurological disorders, or viral, bacterial, fungal, confined and amino acid segments of noticing ansociated with expression of the assessment of the effects of exogenous compounds on the expression of confined and amino acid segments of noticing ansociated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-MAR-2001; 2001US-280387P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity
               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical insging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in medical giannestics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                             Claim 20; SEQ ID No 46995; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, us diagnostics, forensics, gene mapping, identification of responsible for genetic disorders or other traits and to be a second to the contract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; AAS80823.

          The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC glasma pool of a type of animal, or individual sera with antibodies CC against the specific pathogen, tumour, allergen, tissue or host prone to CC auto-immunity. The hyperimmune serum-reactive antigens comprising any of CC the 62 sequences of 53-2261 amino acids fully defined in the CC specification, or their hyperimmune fragments are useful for the CC manufacture of a pharmaceutical preparation, particularly a vaccine CC against staphylococcal infections or colonisation against S. aureus or S. CC epidermidis. The preparation of antibodies is useful for the manufacture CC of a medicament for treating or preventing staphylococcal infections or CC colonisation against S. aureus or S. epidermidis. The antibody CC preparations may also be used for diagnostic and imaging purposes. Other CC conditions that can be treated include cancer, autoimmune diseases or CC infections caused by viral (e.g. HIV, hepatitis A, B or C), fungal or CC protozoan pathogens. This sequence represents a staphylococcal protein CC relating to the method for identifying and producing pathogen specific antigens of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention describes an isolated antibody (I) that binds to a CC staphylococcal surface protein selected from any of the 12 sequences of CC 354-2283 amino acids given in ABP56885 to ABP56886. Also described: CC (1) an isolated antisera (II) comprising (I); (2) a diagnostic kit (III) CC comprising (I) and means for detecting binding by (I); (3) diagnosing CC (M1) an infection of Staphylococcus aureus by adding (I) to a sample CC (M1) an infection of Staphylococcus aureus by adding (I) to a sample CC (IV) for treating or preventing an infection of S. aureus comprising (I) and a vehicle, carrier or excipient; (5) treating (M2) or preventing an infection of S. aureus comprising (I), CC and a vehicle, carrier or excipient; (5) treating (M2) or preventing an infection of S. aureus by administering (I) to a human or animal patient; (C (6) producing (M3) an immunological response by administering to a human CC (8) a vaccine (VI) for treating or preventing an infection of S. aureus comprising the surface protein in an amount of the DsqA protein; (7) and C (8) a vaccine (VI) for treating or preventing an infection of S. aureus comprising the surface protein in an amount effective to elicit an immune CC engines, and a vehicle, carrier or excipient. (I) has antinflammatory, antibacterial, immunosuppressive and antiarthritic activities, and can be used in gene therapy. The antibody, composition and vaccine are useful for treating or preventing Staphylococcus architis or biomaterial crelated infections. The present sequence represents Staphylococcus CC epidermidis KrAN protein, which is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allergen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a gainst the specific pathogen, tumour, allergen, tissue or host prone to against the specific pathogen, tumour, allergen, tissue or host prone to cauto-immunity. The hyperimmune serum-reactive antigens comprising any of the 62 sequences of 53-2261 amino acids fully defined in the CC manufacture of a pharmaceutical preparation, particularly a vaccine against staphylococcal infections or colonisation against S. aureus or S. epidermidis. The preparation of antibodies is useful for the manufacture cof a medicament for treating or preventing staphylococcal infections or colonisation against S. aureus or S. epidermidis. The antibody conditations may also be used for diagnostic and imaging purposes. Other conditions that can be treated for diagnostic and imaging purposes. Other infections or aurent for treating or preventing staphylococcal infections or conditions that can be treated for diagnostic and imaging purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AA681454 to AA683120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the sepidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polynucleotide sequences from the present invention. AAH55091 to
                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                       N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present for SEQ ID NO:4455 to 4464.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 18; Page 516; 2188pp; English.

The sequences can also be used in the diagnosis and treatment of bacterial infectior particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Staphylococcus antibacterial;
                                                                                                             Human

                                                               compound catabolism, bis useful for identifying a gene that compound cativity. The method is useful for compound fungal compound cativity. The method is useful for identifying a gene that compound cativity. The method is useful for identifying a gene that contributes to the virulence and/or pathogenicity of a diploid fungal contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a fungus, a gene contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus agene contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus agene contribute of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian conspound which modulates the compound catabolism, biosynthetic, transporter, transcriptional, conspound catabolism, biosynthetic, transporter, transcriptional, constituty. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the cativity to inhibit growth or proliferation of C. albicans cells and for constitutial Candida ablicans protein used in the method of the invention.

Constitution by C. albicans. The present sequence is that of an activity of a bilicans cells and for the specification but is based on sequence information supplied to Derwent by the C. albication by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cell in the printed specification by C. albication and cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of a gene and placing other allele of the gene under conditional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to constructing (M1) a strain of diploid cells in which both alleles of a gene are modified, comprising one allele by insertion or replacement by a cassette having an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fungus; yeast; tetracyclin; promoter; GRACE strain; biosynthesis; signal transduction; DNA replication; cell division; growth; proliferation; Candida albicans; fungicide; antifungal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       one allele by insertion or replacement by a cassette having expressible selectable marker and modifying other allele by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;
